Projects ... Projects ... PROJECTS!

It is just coming up upon the middle of South Florida's hot and humid summer, and we are only one-third of the way through hurricane season, so while the electricity is flowing and the air conditioner still running strong I thought it would be an appropriate time to update everyone as to what projects I have been working on thus far in 2016:

- Two EDI software selection projects, including documentation such as a vendor questionnaire, client project summary, client transaction (purchase orders, sales orders, invoices) and trading partner data analysis, with ERP integration considerations. The ERP systems for integration are Sage MAS 100, a legacy custom-written FoxPro system, and SAP R3.
- EDI document mapping (transactions: 850, 810, 856, 846, 855) and integration to the company's Sage 100 MAS ERP system using SWK's MAPADOC software.
- Data migration for a field service technician software implementation.
- Data integration between an online training portal (Traineaze) and an on premise employee training tracking software system (which was developed by me in Microsoft Access).
- Development of a medical instrument validation testing tool in Microsoft Excel for use by field service technicians.
- Accounting center code reassignment in a Sage MAS 100 ERP system by expanding the single-element general ledger code to a hierarchical three-element accounting code inclusive of the general ledger code.
- Vendor compliance barcode labeling.
- Authored the standard operating procedures manual and developed the foundation dashboard analytics for an applicant tracking system (Bullhorn).
- Data integration to a FedEx commercial shipping system.
- Conducted training classes in Microsoft PowerPoint, Word, and Excel (beginners and advanced).

True to my talents I remain focused on ERP (Enterprise Resource Planning), EDI (Electronic Data Interchange), barcode application, software (development, analytics), documentation (user and technical), and training, but I am also called upon to expand into other (parallel or similar) areas as my clients need me to. Throughout my projects I am conferring with and advising my clients on strategy, tactics, operational improvements, human resource issues, and risk management/mitigation.

My tagline – "Things seen differently" – is not just a clever play on my company name, it is something my clients have come to understand and appreciate about the talent, creativity, and value I bring to each and every project upon which they rely on me. Let me know if I can do the same for you.
